

Wooden Packing Crates

We manufacture crates to your own specification to ensure a perfect fit and to provide ultimate protection when shipping your valuable items. We can design and manufacture crates and cases tailored to customer requirements. Trifibre is an ISO 9001 registered company and prides itself on customer service to ensure that your items can be shipped on time. With a wide range of products from lightweight storage flight cases and storage trunks for use at home or commercially to Plywood and Timber packing crates, Trifibre is a one stop shop for standard and bespoke packaging.

Metal Fabrication

Trifibre can design and manufacture bespoke metal fabrication shipping and storage containers. Using knowledge gained from manufacturing and designing heavy duty flight cases for shipping large items and cargo, our team can help to develop containers manufactured to your specific requirements. Therefore we can incorporate design aspects such as foam fabrication, gasket seals and internal divisions.

Our in house CAD facilities enable us to design and present rendered 3D drawings of your container prior to manufacture, enabling us to offer a great service to go with our high quality metal fabrications. We have a long established and close association with precision machinists and painting contractors, ensuring we have the necessary contacts, as well as the facilities to meet your metal fabrication needs.

Reusable & Returnable

- Reusable
- Cost Effective
- Made to Measure
- ISO 9001 Registered
- Environmentally Friendly
- Recyclable

Our green, cost efficient and highly protective packaging add value to your supply chain processes.
